

THE LANDLORD HEATING BROCHURE

WITH

**PLUMB
CENTRE**

The LNPG Heating Brochure

Welcome to LNPG's brand-new heating brochure!

Since our inception in 2011, heating system components (and boilers in particular) have made up a flagship category for the group. Now alongside our heating partner Plumb Centre (formerly Wolseley), we're delighted to give them the podium they deserve.

Here you'll find a breakdown of some of the most popular contract-supported manufacturers, ranges, and products available through LNPG, as well as a brief explanation as to where each product sits in the market and, all importantly, the price (ex. VAT) you'd pay as an LNPG member.

Always confirm with your heating engineer that your order is suitable for your property before purchasing.

How to Order

Once you've decided on what you'll need, it's time to place the order. LNPG members have access to all Plumb Centre branches (sometimes branded as Wolseley) in the UK with LNPG-linked cash accounts created upon joining the membership.

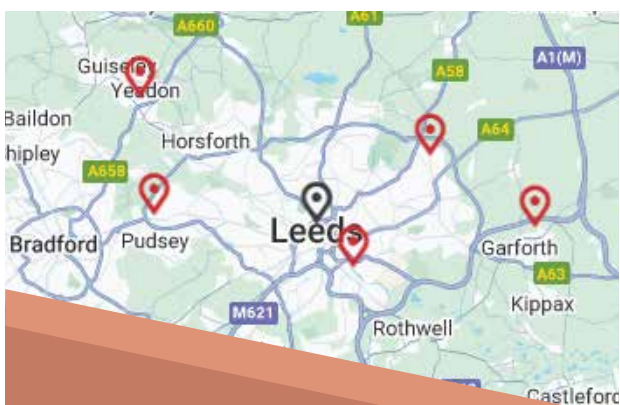

To obtain a quote, you can speak directly to the branch nearest the property where the work will be done over the phone, via email or in person. Alternatively, you can speak to Plumb Centre's Central Heating Team who are best-placed to help LNPG members.

We have a wide range of contract-supported boilers available for LNPG, but first you'll need to know which boiler type is best for your property.

Combi Boilers

A combi boiler is a compact heating system that provides both hot water and central heating in one unit. It works by heating water directly from the mains, so there's no need for a separate hot water tank or cylinder, making it ideal for smaller homes.

System Boilers

System boilers are ideal for larger properties with higher hot water demands. Using a separate hot water cylinder to store hot water while providing central heating, they can supply multiple taps or showers simultaneously without running out of hot water.

Heat Only Boilers

A heat only boiler, also known as a regular or conventional boiler, uses a gravity-fed system that requires both a cold water tank, often located in the loft, and a hot water cylinder. It's typically used in homes with traditional heating systems and can handle higher hot water demand, especially with multiple bathrooms.

Size Guide

The below guide can be used to help estimate the size of boiler needed for your property. This is a guide only and you should contact your heating engineer to determine the exact specification before ordering.

No. of Bedrooms		1	2	2	3	3	4	4	5	5	5

Please refer to the full Wolseley Price File for more flue options.

The number one cause of boiler breakdowns is the build up of sludge (also known as magnetite) clogging up your heating system.

To combat this, it is highly recommended that a magnetic filter and appropriate chemicals are used to capture magnetite before it infiltrates your boiler.

Cylinders

It's easy to get bogged down in cylinder types, but the basics are these: vented cylinders tend to be fed from a cold-water tank in the loft, known as a gravity-fed system, whereas unvented cylinders are part of a closed system and pressurised by incoming water supply. Both types can be heated either directly or indirectly (explained below).

As unvented cylinders make for the majority of installs, we've included what's available on the LNPG contract for this category here. For more specialised cylinders, including unvented options, please contact the Wolseley Central Heating Team on 03448 910 188 or lnpg@wolseley.co.uk.

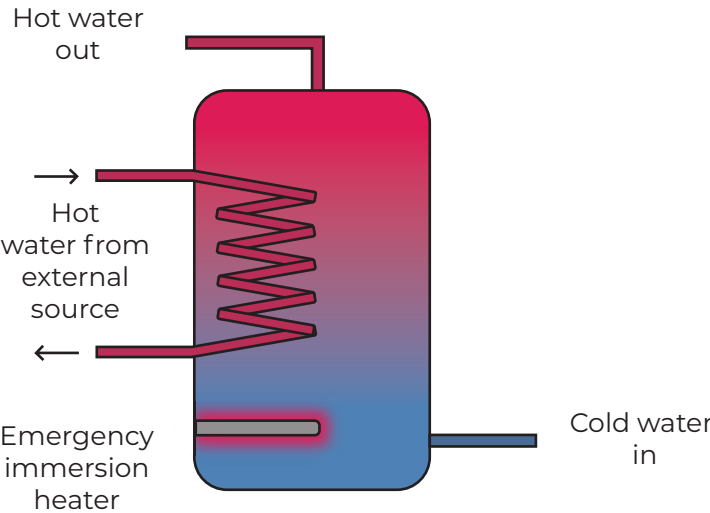

Direct Cylinders

Heating water using a built-in electric immersion heater, direct cylinders don't rely on an external heat source. These are common in homes without a gas supply and smaller houses/flats with lower hot water demands.

Indirect Cylinders

Inside an indirect cylinder, hot water from an external source (such as a boiler) flows through a heat exchanger, heating the stored water while avoiding the two supplies mixing. Indirect cylinders often include an immersion heater as a backup.

Cylinders

Size Guide

The below guide can be used to help estimate the size of cylinder needed for your property. This is a guide only and you should contact your heating engineer to determine the exact specification before ordering.
